

## **OKPALA ONYINYE LOVETH**

### **PERSONAL STATEMENT**

My name is Onyinye Loveth, and I am a salesperson and team lead at Investment One Financial Services Limited. With over 15 years of experience in the Nigerian capital market and 2 years in administrative services, I am eager to advance my career in the data field.

I studied Agricultural Engineering at the University of Technology, Minna in Niger State, and earned my Executive MBA from Ile-Ife University, both in Nigeria. I began my sales career in 2004 and have navigated this path for 20 years, learning from challenges, celebrating significant wins, and adapting to the ever-evolving landscape of the industry.

My role has continuously evolved in response to technological advancements, diverse policies, changing customer preferences, and the dynamics of business competition. This journey has compelled me to stay relevant by focusing on personal development, which has enhanced my ability to build strong business relationships and contribute meaningfully to my organization.

My responsibilities encompass capital market operations, client trading and investment activities, business development, performance evaluation, risk management, client profiling, market analysis, and collaboration with our technology teams on application programming interfaces. These experiences have fueled my interest in data analytics, prompting me to pursue online courses through platforms like Udemy and Google. I also engage in personal coaching to keep abreast of industry trends. I am actively applying analytical skills in client analysis, market evaluations, and reporting, as well as creating insights for business development and investment decision-making.

Transitioning from a trainee to a team leader has allowed me to cultivate essential skills, including communication, leadership, knowledge transfer, critical thinking, problem-solving, teamwork, conflict resolution, and attention to detail (amongst others). I have recognized the significant opportunities that data analysis presents for my career and personal growth, and I believe that the Data Analytics for Management master's program at Memphis University aligns perfectly with my educational goals.

Pursuing my master's degree at your university will empower me to enhance my relevance, foster growth, and contribute to society. My goal is to become a professional in data analysis, bringing insights and solutions to real-world challenges for positive impact.
