

PERSONAL STATEMENT OF IFEOLUWA OBEBE

I have always been fascinated by the way technology could solve problems and make life easier. I've enjoyed dabbling with computers and experimenting with different applications right from a young age, so I knew if I was going to pick any career it would be computer or technology related. I did my research and stumbled upon Software Engineering which I eventually studied for my undergraduate degree.

I graduated with a Second Class Upper Honors Degree from Babcock University, Ilishan- Remo in Nigeria, where I earned my Bachelor of Science Degree in Software Engineering. I've always been drawn to the world of data and how it shapes our reality, which motivated me to want to pursue a Master's Degree in Data Science at University of Memphis

Over the 4 years of my undergraduate program, I developed an interest in Programming Languages such as C++, JavaScript, Python, etc. I also took courses in Data Virtualization and Open Source Systems and Development which I found very interesting. During my third year, I wanted to have more experience and gain a better understanding of the Software industry, so I did a 6-month internship training at HiiT PLC. There, I learned how to build websites and web applications using various languages and tools (Web Development), as well as Graphics Design. After completing the program, I received certifications at the end of the internship. I was excited as I was able to gain a lot during that period through my interactions, which gave me deeper insights and exposure to how the industry works.

As an individual, I am highly motivated, ambitious, and goal-oriented. I possess excellent problem-solving skills and I am a good team player. Pursuing a Master's Degree in Data Science will equip me with the skills and knowledge I need to help organizations make better data-driven decisions. I am confident that I have the passion, skills, and determination to excel in the Data Science program and contribute positively to the university's community.

Additionally, my proficiency in English Language has helped me hone my argumentative, research and communication skills effectively.

One of the interesting things about Data Science is its potential to transform the world we live in. With the right tools and techniques, it can solve some of the most pressing problems in society today. I am particularly excited about using tools like Python, R, Project Jupyter, and Power BI to uncover patterns and insights that can make a real difference.

Pursuing a degree in Data Science will not only help me achieve my personal goals but also positively impact society by developing innovative solutions to everyday problems. My experience and education throughout my undergraduate degree at Babcock University have prepared me to take the next step in my academic journey and I am confident that I would be a fantastic addition to the university.

In the long run, I would be able to contribute to the development of my home country, Nigeria, and the world at large by utilizing the knowledge I acquire from my post-graduate studies. I believe that University of Memphis is an excellent fit for me because of its academic excellence, research opportunities, and industry connections which makes it an ideal place for me to pursue my career aspirations.

Thank You.
